

CASE STUDY: CAMPUS SOLUTIONS

OPPORTUNITY:

University with three separate campuses spread out over a 20-mile area facing difficult security challenges. Staff unable to effectively monitor and protect widespread areas using traditional patrols. Costly equipment and items were being stolen from newly renovated “smart” classrooms, and loitering and vandalism quickly escalated to a point where security costs rose to unacceptable levels.

TECHNICAL SITUATION:

Viewpoint was able to use the existing fiber optics to allow for easier and more cost-effective installation. Existing closed-circuit cameras utilized and augmented. Viewpoint’s video/voice system integrated.

SOLUTION:

Monitoring and video/voice services were implemented for all three campuses and managed via a single platform. Services configured through a designed schedule of proactive video patrols, basic motion alarm events, and management of the integrated card access system. Mass notification/announcement capabilities at specific locations or campus-wide.

RESULTS:

University was able to realize more than 25% savings in operating costs following the installation and implementation of Viewpoint’s video/voice services. Specific areas of concern were addressed, and dramatic decreases were realized with incidents of loitering, theft, and vandalism.
